- Worked on Authentication using **Azure Active Directory.**
- Working with SQL database (Procedure, Functions, Joins etc.) as per business.
- Guiding and Code Review of team mate.

PROJECTS IN Broadridge Financial Solution

1. EU Mainframe Portal

The purpose of this project to create a UI for European client and show the detokenized PII data to the user if the client is European client. As part of this project we have created one angular application and made the changes to one existing application ie; Global Bank and Brokers application to show the detokenized data to user and keep the tokenized PII data in US server. The actual client's PII data stored only in one of Broadridge's EU datacenters.

Responsibilities:

- Involved in project requirement discussions.
- Enhanced features and resolved bugs.
- Working with SQL Database.
- Have used **Angular 6.0** for UI development and **.Net Core 3.1** for backend integration.
- Involved in deployment and production support.

2. Reorg Action UI(Election Processing)

This application enables Financial Advisors (FA) to manage, submit, change and withdraw elections for their associated accounts.

Responsibilities:

- Interacting with Onsite team for Requirements discussion
- Application coding, **Defect fixing/Troubleshooting**.
- Involvement in process related activities.

CERTIFICATIONS

- Certification on Microsoft Azure Fundamental (Az900)
